

Market Risk Dashboard

- generated_at: `2026-05-25 22:23:57 Asia/Taipei`
- data_date: `20260525`
- market_regime: `strong\_bull`
- risk_level: `high\_risk`
- risk_score: `4`
- futures_options_source_status: `ready`

Data Status

This report uses official market index data already stored in the repo plus TAIFEX open data for futures, options, put/call ratio, and Taiwan VIX. It is a market-background dashboard, not a trading instruction.

Market Index Regime

Futures / Options Positioning

Upcoming Macro Event Calendar

- 20260528 US_GDP: GDP (Second Estimate) and Corporate Profits, 1st Quarter 2026 (days=3, importance=medium)

- 20260707 US_trade: U.S. International Trade in Goods and Services, May 2026 (days=43, importance=medium)

Six-Month Technical Charts

The PDF version of this dashboard must include six-month charts for index trend, fear/option indicators, foreign futures positioning, and retail mini-TAIEX futures proxy positioning. If a source has insufficient history, the PDF still includes a placeholder chart and states the limitation.

Important limitation: the current repo stores TWSE/TPEx index close, MA20, MA60, and return history, but not a complete index OHLC/volume raw table. Therefore this dashboard labels the index chart as a close/MA technical chart, not a candlestick K-line chart. After index_ohlc_history.csv is added, the next version should draw standard index K-line charts.

- chart: `output/latest/charts/market\_regime/market\_index\_technical\_6m.png`
- chart: `output/latest/charts/market\_regime/risk\_indicators\_6m.png`
- chart: `output/latest/charts/market\_regime/foreign\_futures\_net\_oi\_6m.png`
- chart: `output/latest/charts/market\_regime/retail\_mtx\_proxy\_6m.png`

Technical / Pattern Notes

- TWSE / TAIEX: strong_bull; close 43,644.40; 6M range 26,912.17-43,644.40; distance from 6M high +0.00%; above MA20=True, above MA60=True.
- TPEx / OTC: strong_bull; close 434.99; 6M range 254.40-434.99; distance from 6M high +0.00%; above MA20=True, above MA60=True.

Retail Mini-TAIEX Futures Proxy

- This is a contrarian sentiment proxy, calculated as the negative of the three-institution net open interest in mini-TAIEX futures.
- latest_proxy_value: `+12,004`
- state: `retail\_net\_long\_watch`
- Positive proxy values mean non-three-institution accounts are net long MTX; crowded net-long readings are treated as a caution signal, not a standalone short signal.
- Negative proxy values mean non-three-institution accounts are net short MTX; extreme net-short readings may support contrarian risk-on interpretation, but still need index confirmation.

Risk Notes

- TWSE strong bull
- TPEx strong bull
- Taiwan VIX elevated
- TXO put/call OI hedge elevated
- Foreign TX futures heavy net short
- Retail MTX proxy net long watch

Usage Boundary

- Use this dashboard as market background for Taiwan index futures and portfolio exposure review.
- Do not treat a single futures/options indicator as a buy or sell signal.
- Keep this report separate from the daily all-market candidate-stock report; that report may cite market regime only as background.
